

CE205 Data Structures

Week-3

Stacks, Queue Structures, and Related Algorithms and Problems.

1. Stack ADT
2. Stack Using Array
3. Stack Using Linked List

a. Infix

b. Postfix

c. Prefix

5. Infix to Postfix Conversion

6. Postfix Expression Evaluation

7. Queue ADT

a. First Come First Serve, FCFS, FIFO

8. Queue Data structure Using Array

9. Queue Using Linked List

10. Circular Queue Data structure

1. Hanoi Tower

2. Multilevel Queue (MLQ)

Hanoi Tower

Recursive Version

[Program for Tower of Hanoi - GeeksforGeeks](#)

Iterative Version

[Iterative Tower of Hanoi - GeeksforGeeks](#)

Calculate the total number of moves required i.e.

" $2^n - 1$ " here n is number of disks.

2. If number of disks (i.e. n) is even then interchange destination pole and auxiliary pole.

3. for $i = 1$ to total number of moves:

if $i \% 3 == 1$:

legal movement of top disk between source pole and destination pole

if $i \% 3 == 2$:

legal movement top disk between source pole and auxiliary pole

if $i \% 3 == 0$:

legal movement top disk between auxiliary pole and destination pole

S = Source

A = Aux

D = Dest

Multi Level Queue

Multilevel Queue (MLQ) CPU Scheduling - [GeeksforGeeks](#)
