## 2.0.2 Outline

- Graph Representation Tools
  - Tree Structures and Binary Tree and Traversals (In-Order, Pre-Order, Post-Order)
  - Heaps (Max, Min, Binary , Binomial, Fibonacci, Leftist, K-ary) and Priority Queue
  - Heap Sort
  - Huffman Coding
- 

## 2.0.3 Graph Representation Tools

- Microsoft Automatic Graph Layout

## 2.0.7 Longest Common Ancestor

### Definition

The **Lowest Common Ancestor** (LCA) of two nodes 'a' and 'b' in a **rooted tree** is the deepest node 'c' that has both 'a' and 'b' as descendants (where a node can be a descendant of itself)

$LCA(5, 4) = 2$

The LCA problem has several applications in Computer Science, notably:

- Finding the distance between two nodes
- Inheritance hierarchies in OOP
- As a subroutine in several advanced algorithms and data structures
- etc...

## 2.0.8 Longest Common Ancestor

### Understanding LCA

$LCA(13, 14) = 2$
