

Week 7 – Midterm Project Demos

CEN207 Data Structures (formerly CE205) · Fall 2026–2027 · 30.10.2026

This week there is no new topic: each team demonstrates the **C implementation** of the term project (RAP1) and submits the midterm report.

What to bring

- Your project running on **Windows and WSL/Linux** (build with CMake from a clean clone).
 - GoogleTest results with **100% coverage** and the Doxygen PDF.
 - The midterm report (design, why each structure, Big-O and measurement tables).
-
- **Scope:** requirements V1–V6 (weeks 1–6) — see the [Project Guide](#), sections 5 and 8.
 - **Demo:** about 10 minutes per team: live run, one operation explained line by line with a box-and-arrow drawing, questions to every member.
 - **Next week:** Quiz-1 (weeks 1–6) in the midterm exam week.

Demo checklist (local)

A private repository has no GitHub Pages site, so you show the project locally (details: [Project Guide](#)). What you open and show, in this order:

1. The **home page** of the local site (`9-open-site-...`, on `http://localhost`).
2. **Each report page:** tests, code coverage, documentation coverage (Windows and Linux).
3. The **API docs**.
4. The `release/` **folder** listing.
5. **Run the app** from the release archive.
6. The **GitHub Release page** of your private repository (the instructor is a collaborator).
